Subject: Reference Letter for suction excavator work executed on VTTI Fujairah facilities

To whom it may concern

The VTTI PMT hereby confirms the successful use of the suction excavator of the company Heitmann Middle East Industry Maintenance L.L.C. on our Refinery in Fujairah.

VTTI has used Heitmann as contractor for the suction excavator works several times, for the tank expansion project work executed on the existing facilities; for opening of trail pits, excavation of existing cable trenches and for the removal of soil close to life underground facilities.

The suction excavator has proven for VTTI to be an effective and safe method for these type of works, which are executed by Heitmann in an organized safe and fully controlled manner with professional trained personnel.

By continuously measuring the hydrocarbon and H₂S concentrations in the suction excavator outlet vapour stream with the Heitmann controlled EX TOX system which is a standard provided system for the machine, work in the life facility was done in a controlled manner.

The VTTI expansion project management team endorses the utilization of the Heitmann suction excavator for these type of works and applications.

Peter J. van Rijn
